

RUSS ONE MAN FEATURES

Proven design and reliability

The one man Minipactor adaptation has evolved from our highly successful range of Minipactor's. Extensive research and design has been invested in the development of this unit. Customer feedback continues to drive system refinement and enhancement.

A number of these single operator units have been working successfully in the field, for many years. Affordability, reliability, safety and great return on investment makes this unit attractive to the small local authorities and

communities alike.

Rugged, reliable and extremely cost effective is how our customers describe our units. This is reflected in the increasing number of repeat sales.

A few additions to our, well tested and field proven, hydraulic system means the same level of reliable operation our customers have come to expect of our equipment.

High lift unit ensures maximum bin loading height. This means less time spent compacting the load and more time being productive.

Reduced maintenance costs

New high tech Mine Industry bushings in our system ensures less downtime, reduced maintenance costs, and best of all, longer life expectancy for the equipment. All this adds up to better returns for your investment dollar.

No flow diverters in the hydraulic system minimise heat generation and extends the life cycle of the hydraulic system. No electronics minimises the possibility of downtime from vibration, shock and dusty environments.

Flexibility for the operator

Units are fitted standard with "in-cab" controls for maximum driver comfort and reduced strain and fatigue. External operation stations can be fitted as an additional option. This makes the unit great for park application where the vehicle is parked and the operator/s bring the bins to a central location.

Dual control systems can be fitted to a wide range of vehicles suitable for this type of application. Industry feedback indicates this is not a necessity for the smaller cab vehicle. Additional, strategically located mirrors permits the operator easy operation of the unit from their normal driving position.

Safer working environment

Compaction and ejection is performed by the heavy duty fully fabricated blade that travels horizontally in a fully guided sump on replaceable Bissalloy wear pads. Horizontal ejection reduces the loss of stability experienced on uneven or poorly compacted surfaces such as often found at landfill sites.

Operator and public safety issues have been addressed in the design of the complete range of Russ Minipactor's. Interlock systems, micro switches and emergency stops reduce the likelihood of injury to the operator or the public during the operations of the vehicle.

Consistently high resale values

Outstanding resale values have been consistently achieved for the Russ Minipactor. Up to fifty (50) percent of the initial purchase price is not uncommon.

An Economical ONE MAN Side Loading Compactor with 12m³ capacity

*Our outstanding 8 cubic metre RUSS MINIPACTOR just got
a whole lot better!*

*Now you can get it in 12 cubic metre capacity with our unique ONE MAN
side loader standard!*

Still with all the features you've come to expect from the **RUSS MINIPACTOR** range

- ✓ NO complicated Electronics
- ✓ Retains the highly reliable and proven **RUSS MINIPACTOR** hydraulic system.
 - ✓ Cool running Hydraulic system (No Heat Exchangers)
 - ✓ NO Flow controllers
 - ✓ Hydraulic Twin Cylinder Rear Bubble Door.
- ✓ Proportional Air Controlled Joystick
- ✓ Air controlled Hydraulic Valves
- ✓ Easily serviced by any competent mechanic with a standard tool kit.
 - ✓ NO Expensive test equipment
 - ✓ NO special technical training required.
- ✓ Designed to be on the road and NOT in the workshop.

SIMPLE
RELIABLE
PROVEN
RUGGED

This unit is NOT a high speed computer controlled compactor, but has been **specially** designed to be Low Cost, High Quality Compactor for smaller Council's that need something in between. You get the functionality of the ONE MAN operation from the drivers seat, or alternatively you can have a dual control unit. Ideal for Councils with low bin numbers looking for that extra bit of speed in service provision. Our special designs are ideal for operation in remote areas where there is limited service and technical facilities locally.
